Comment on gmd-2021-375

Juan Antonio Añel

Chief editor comment on "Improving the joint estimation of CO₂ and surface carbon fluxes using a constrained ensemble Kalman filter in COLA (v1.0)" by Zhiqiang Liu et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2021-375-CEC1>, 2021

Dear authors,

After checking your manuscript, it has come to our attention that it does not comply with our Code and Data Policy.

https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

You have archived your code in GitHub and another repository. However, neither of them are suitable repositories. For example, GitHub itself instructs authors to use other alternatives for long-term archival and publishing, such as Zenodo. Therefore, please, publish your code in one of the appropriate repositories.

In this way, before the Discussions stage is closed, you must reply to this comment with the link to the repositories for the code and their correspondings DOI. Moreover, please, include the exact version numbers of GEOS-Chem and LETKF that you use.

Also, you must include in a potential reviewed version of your manuscript the modified 'Code and Data Availability' section and the DOI of the code.

Another issue to check are the dates of last access to the webpages that you mention, that are quite old. Please, fix it.

Finally, for the code that you store at the moment in the GitHub repository, there is no license listed. If you do not include a license, the code continues to be your property and can not be used by others. Therefore, when uploading the model's code to the repository, you could want to choose a free software/open-source (FLOSS) license. We recommend the GPLv3. You only need to include the file '<https://www.gnu.org/licenses/gpl-3.0.txt>' as LICENSE.txt with your code. Also, you can choose other options. For example, Zenodo provides GPLv2, Apache License, MIT License, etc.

Please, reply as soon as possible to this comment with the link for it so that it is available for the peer-review process, as it should be.

Juan A. Añel
