Comment on gmd-2021-383

Hans Verbeeck (Editor)

Editor comment on "Impact of changes in climate and CO₂ on the carbon storage potential of vegetation under limited water availability using SEIB-DGVM version 3.02" by Shanlin Tong et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2021-383-EC1>, 2022

Dear authors,

I have seen that in your final response, you did not respond to RC2 yet. Please consider to do so.

In addition, both RC1 and RC2 have posted quite fundamental comments, and RC2 is advising to consider another journal. I would like you to take these suggestions seriously and point you to the fact that only a very thorough revision of the manuscript could potentially lead to publication in GMD.

Please let me know if you have any further questions in case you consider a resubmission to GMD.

best regards,

Hans Verbeeck

topical editor
