Comment on gmd-2021-388

Juan Antonio Añel

Chief editor comment on "Sensitivity of tropospheric ozone to halogen chemistry in the chemistry–climate model LMDZ-INCA vNMHC" by Cyril Caram et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2021-388-CEC1>, 2021

Dear authors,

After checking your manuscript, it has come to our attention that it does not comply with our Code and Data Policy.

https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

You have archived your code and data in Google Drive. However, Google Drive is not a suitable repository for long-term archival and publishing. You must move these assets to one of the recommended ones. Many of the authors that publish in Geosc. Mod. Dev. use Zenodo and Panagea. Therefore, please, publish your code in one of the appropriate repositories, and include the relevant primary input/output data. In this way, you must include in a potential reviewed version of your manuscript the modified 'Code and Data Availability' section, the DOI of the code (and another DOI for the dataset if necessary). Also, I have not found a license listed for the code in your Google Drive. If you do not include a license, the code is not FLOSS "free-libre open-source software"; it continues to be your property. Therefore, when uploading the model's code to Zenodo, you could want to choose a free software/open-source (FLOSS) license. We recommend the GPLv3. You only need to include the file '<https://www.gnu.org/licenses/gpl-3.0.txt>' as LICENSE.txt with your code. Also, you can choose other options that Zenodo provides: GPLv2, Apache License, MIT License, etc.

Please, reply as soon as possible to this comment with the link for it so that it is available for the peer-review process, as it should be.

Dr. Juan A. Añel
Geosc. Mod. Dev. Exec. Editor
