Comment on gmd-2022-104

Juan Antonio Añel

Chief editor comment on "Basin-scale gyres and mesoscale eddies in large lakes: a novel procedure for their detection and characterization, assessed in Lake Geneva" by Seyed Mahmood Hamze-Ziabari et al., Geosci. Model Dev. Discuss.,

https://doi.org/10.5194/gmd-2022-104-CEC1, 2022

Dear authors,

Unfortunately, after checking your manuscript, it has come to our attention that it does not comply with our "Code and Data Policy".

https://www.geoscientific-model-development.net/policies/code_and_data_policy.html You have archived your data and analysis on GitHub. However, GitHub is not a suitable repository, and it instructs authors to use other long-term archival and publishing alternatives, such as Zenodo.

The same applies to the MITgcm: You cite its webpage and a paper; however, neither are proper ways to secure long-term access to the code. However, you should know that MITgcm has a Zenodo repository (https://zenodo.org/record/4968496). You should look for the right tag/version, and if it is listed, then change the information you provide in the 'Code Availability Section' to include this repository. If the tag/version you use is not included in Zenodo, then you could ask the maintainers to upload the version you have used. Admittedly, this is something you can do by yourself, as the MITgmc is released under the MIT License, allowing you to repost the code.

Therefore, please, publish the assets of your work in one of the appropriate repositories, and reply to this comment with the relevant information (link and DOI) as soon as possible, as it should be available for the Discussions stage.

Moreover, in this way, you must include in a potential reviewed version of your manuscript the modified 'Code and Data Availability' section, with its corresponding DOI.

Be aware that failing to comply with this request could result in the rejection of your manuscript for publication.

Juan A. Añel
