Referee comment on "stoPET v1.0: a stochastic potential evapotranspiration generator for simulation of climate change impacts" by Dagmawi Teklu Asfaw et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2022-128-RC3>, 2022

This reviewer considers that the authors substantially improved the manuscript following the provided comment.

The manuscript seems to be good enough to be published as is in GMD.

One thing, this reviewer just want to mention, is that he knows that the authors try to present the stochastic series in Fig12 compared to the observation. this reviewer worried that the readers might have wrong implication from overlapping. This reviewer thinks the additional explanation is enough.
