Comment on gmd-2022-132

Juan Antonio Añel

Chief editor comment on "Global biomass burning fuel consumption and emissions at 500 m spatial resolution based on the Global Fire Emissions Database (GFED)" by Dave van Wees et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2022-132-CEC1>, 2022

Dear authors,

After checking your manuscript, it has come to our attention that it does not comply with our "Code and Data Policy".
https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

We can not accept embargoes such as registration, previous contact with the authors or availability of the model under request.
In this way, you must reply to this comment with the link to an open repository containing the code of the model used in your manuscript, with its DOI.

Also, the same applies to the data. We do not accept generic links to web pages such as globalfiredata.org. First, this webpage is not a trustable long-term repository for scientific data. Secondly, the link does not identify clearly the specific files used in your work. Therefore, as for the code, you must include in one of the acceptable repositories (check them in our policy) the files used in your manuscript and provide its DOI.

Please, reply as soon as possible to this comment with the links and DOIs so that the necessary assets are available for the peer-review process, as they should be.

Be aware that failing to comply with this request will result in the rejection of your manuscript for publication.

Best regards,

Juan A. Añel
Geosci. Model Dev. Executive Editor
