Author comment on "Data-driven Global Subseasonal Forecast Model (GSFM v1.0) for intraseasonal oscillation components" by Chuhan Lu et al., Geosci. Model Dev. Discuss., https://doi.org/10.5194/gmd-2022-146-AC1, 2022

Dear Editor,

We are grateful for your comments on our manuscript. The reason why the Zenodo repository for code is the same as the data is that we put the code and data in the same Zenodo repository. Therefore, to make a clearer distinction between where the two are stored, we separated the code and data and re-uploaded to Zenodo repository. In addition, the license also has been added in the new repository.

The scripts for training the ResNet and SE-ResNet model, and constructing figures are available in the following Zenodo repository: https://zenodo.org/record/7009166 (Lu et al., 2022a). And the data for training the models and the prediction of the models are archived at https://zenodo.org/record/7009111 (Lu et al., 2022b).

Thank you and best regards.

Yours sincerely,

Chuhan Lu, Dingan Huang, Yichen Shen, Fei Xin
