Comment on gmd-2022-147

Christoph Knote (Editor)

Editor comment on "Yeti 1.0: a generalized framework for constructing bottom-up emission inventories from traffic sources at road-link resolutions" by Edward C. Chan et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2022-147-EC1>, 2022

Dear authors,

we now - finally - have three reviews of your manuscript. While one of the reviewers has recommended to reject your manuscript, the reasons to do so that were put forward in that review do not warrant rejection from my point of view. Also the two other referees were critical of your work, but none of them suggested to reject it.

Hence I encourage you to submit a revised version of your work, considering the comments from all three reviewers.

Thank you and best regards,

Christoph Knote
