Comment on gmd-2022-164

Juan Antonio Añel

Chief editor comment on "Development of an LSTM broadcasting deep-learning framework for regional air pollution forecast improvement" by Haochen Sun et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2022-164-CEC1>, 2022

Dear authors,

Unfortunately, after checking your manuscript, it has come to our attention that it does not comply with our "Code and Data Policy".

https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

You have archived the implementation of your work on GitHub. However, GitHub is not a suitable repository. GitHub itself instructs authors to use other long-term archival and publishing alternatives, such as Zenodo. Therefore, please, publish your code in one of the appropriate repositories, and reply to this comment with the relevant information (link and DOI) as soon as possible, as it should be available for the Discussions stage. Also, please, include the relevant primary input/output data that you use.

In this way, you must include the modified 'Code and Data Availability' section in a potential reviewed version of your manuscript, the DOI of the code (and another DOI for the dataset if necessary). Also, on GitHub, there is no license listed. If you do not include a license, the code continues to be your property despite what you state. Therefore, when uploading the model's code to Zenodo, you could want to choose a free software/open-source (FLOSS) license. We recommend the GPLv3. You only need to include the file '<https://www.gnu.org/licenses/gpl-3.0.txt>' as LICENSE.txt with your code and can not be used by others, despite any statement on being free to use. . Also, you can choose other options that Zenodo provides: GPLv2, Apache License, MIT License, etc.

Please, be aware that failing to comply with this request could result in the rejection of your manuscript for publication.

Juan A. Añel
