Comment on gmd-2022-178

Juan Antonio Añel

Chief editor comment on "A new bootstrap technique to quantify uncertainty in estimates of ground surface temperature and ground heat flux histories from geothermal data" by Francisco José Cuesta-Valero et al., Geosci. Model Dev. Discuss.,
<https://doi.org/10.5194/gmd-2022-178-CEC1>, 2022

Dear authors,

Unfortunately, after checking your manuscript, it has come to our attention that it does not comply with our "Code and Data Policy".
https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

We do not accept embargoes such as publication of the code after acceptance, registration or previous contact with the authors. One of the main goals of the review process is to evaluate work. The code is a core part; without it, we can not properly review the manuscript. Admittedly, this was an oversight on our side, and your manuscript should never have gone out to Discussions without having published the code and necessary input and output data to reproduce your work. In this way, we are now offering you the possibility to fix this situation.

Therefore, please, publish your code in one of the appropriate repositories, and reply to this comment with the relevant information (link and DOI) as soon as possible, as it should be available for the Discussions stage. Also, please, include the relevant primary input/output data.

In this way, you must include the modified 'Code and Data Availability' section in a potential reviewed version of your manuscript, the DOI of the code (and another DOI for the dataset if necessary).

As a side note, remember to include a license for your code. If you do not include a license, the code continues to be your property and can not be used by others, despite any statement on being free to use. You could want to choose a free software/open-source (FLOSS) license. We recommend the GPLv3. You only need to include the file '<https://www.gnu.org/licenses/gpl-3.0.txt>' as LICENSE.txt with your code. Also, you can choose other options that Zenodo provides: GPLv2, Apache License, MIT License, etc.

Please, be aware that failure to comply promptly with this request will result in rejecting your manuscript for publication, independently of any other consideration.

Regards,

Juan A. Añel

Geosci. Model Dev. Exec. Editor
