Author comment on "Barotropic Tides in MPAS-Ocean: Impact of Ice Shelf Cavities" by
Nairita Pal et al., Geosci. Model Dev. Discuss.,
<https://doi.org/10.5194/gmd-2022-188-AC3>, 2022

Thank you very much for sending us the report and for giving us the chance to address
the concerns. We thank you
for taking the time to prepare the report on our paper.

We are pleased to receive the positive review of our manuscript. It is indeed encouraging
to read that our work on implementing tides in MPAS--Ocean is significant, and will enable
more accurate tidal predictions, and hence will facilitate prediction of global climate
variability. The comments have greatly contributed to the improvement of our
manuscript.

We give below detailed responses to the various questions and comments. In addition, we
have added the particular version of the Energy Exascale Earth System Model that we use
in the title of the manuscript, the main body of the paper, as well as the code availability
section, as suggested by the editorial team. The changes in our revised manuscript, which
have been made to address the comments of the Referee and the editorial team, are
indicated in blue. We have addressed the concerns fully. We hope, therefore, that our
paper will now be accepted for publication in Geoscientific Model Development.

Best regards,

Nairita Pal (on behalf of all authors)
