Robert Oehmke (Referee)

Referee comment on "Strategies for Conservative and Non-Conservative Monotone Remapping on the Sphere" by David H. Marsico and Paul A. Ullrich, Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2022-248-RC4>, 2022

Thanks for the response to my comments.

Looking at the graph you sent, I can see what you mean about the similarity between the bilinear and the Delaunay. If the other looks like that as well, I think that just adding a sentence or two indicating that the rest are very similar to the bilinear (or just putting in the graphs if that seems better to you) would answer my comment.

The picture illustrating the Delaunay does look like what I was thinking of. (I just thought a high level visual would help illustrate what's happening.)

All the rest sounds good.

Looking forward to seeing the revised paper.
