Comment on gmd-2022-50

Juan Antonio Añel

Chief editor comment on "Neural networks for data assimilation of surface and upper-air data in Rio de Janeiro" by Vinícius Albuquerque de Almeida et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2022-50-CEC1>, 2022

Dear authors,

Unfortunately, after checking your manuscript, it has come to our attention that it does not comply with our "Code and Data Policy".
https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

First, your manuscript does not contain the mandatory Code Availability section. You have included some information about WEKA and TensorFlow inline in the text, but it should not be there, but in the specific section required at the end of the manuscript. Also, in the text, you point out web pages that are not trustable repositories for scientific archival. In this way, you must publish the WEKA and TensorFlow codes in a new repository, one from our list of suitable ones. The same applies to WRF. You must indicate too the specific version of the model that you use.

Second, all the repositories that you provide in your current Data Availability section do not comply with our requirements. It is especially striking in the case of GitHub. GitHub is not a suitable repository, and it instructs authors to use other alternatives for long-term archival and publishing, such as Zenodo (which you can create directly from GitHub).

Therefore, please, publish all the software used in your manuscript in one of the appropriate repositories, and reply to this comment with the relevant information (link and DOI) as soon as possible, as it should be available for the Discussions stage. Also, please, include the relevant primary input/output data. In this way, you must reply to this comment with the DOI and link for those repositories so that they are available during the Discussions stage (as requested). Moreover, please, include in any potential reviewed version of your manuscript the modified 'Code and Data Availability' section with the requested information.

Please, be aware that failing to comply promptly with this request will result in rejecting your manuscript for publication.

Regards,

Juan A. Añel

Geosci. Model Dev. Exec. Editor
