Proceed with revised manuscript

Andrew Wickert (Editor)

Editor comment on "HORAYZON v1.2: an efficient and flexible ray-tracing algorithm to compute horizon and sky view factor" by Christian R. Steger et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2022-58-EC1>, 2022

Dear Dr. Steger and co-authors,

Both referees have left positive comments and recommendations of minor revisions, and Jeff Dozier likewise shared some potentially relevant updates from his own work. Both reviewers commended you on a clear and well-illustrated manuscript, and I agree with them. In this case, I would encourage you to -- even before the close of the open discussion period -- begin formulating a response to referee and community comments and revising your paper. Based on the referee recommendations, I expect that a thorough revision and response by you may result in a revised manuscript that could be accepted as-is.

Best of luck with your revisions,

Andy
