## Comment on gmd-2022-9

Juan Antonio Añel

---

Chief editor comment on "Thermal modeling of three lakes within the continuous permafrost zone in Alaska using the LAKE 2.0 model" by Jason A. Clark et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2022-9-CEC1>, 2022

---

Dear authors,

After checking your manuscript, it has come to our attention that it does not comply with our Code and Data Policy.

[https://www.geoscientific-model-development.net/policies/code\\_and\\_data\\_policy.html](https://www.geoscientific-model-development.net/policies/code_and_data_policy.html)

First of all, for the data and processing scripts, you point to two papers where it is impossible to get them unless after contact with the authors. However, we can not accept embargoes such as registration or previous contact with the authors. Therefore, to continue with the review process of your manuscript, you must publish your code in one of the appropriate repositories listed in our policy. We understand that some files used in your study can be large (e.g., full output from models). In such cases, instead of storing the complete files, you should at least keep the variables or final fields computed and used in your work.

Also, we can not accept Parallel.ru as a suitable repository. Again, it is not listed in our policy and does not comply with our long-term archival requirements, not removal and persistent digital identifier. Therefore, deposit in a repository covered by our guidelines a copy of the version of the LAKE model used here.

Also, I have not seen a license listed in the LAKE repository. If you do not include a license, the code continues to be your property and can not be used by others, despite any statement on being free to use. Therefore, when uploading the model's code to the repository, you could want to choose a free software/open-source (FLOSS) license. We recommend the GPLv3. You only need to include the file

'<https://www.gnu.org/licenses/gpl-3.0.txt>' as LICENSE.txt with your code. Also, you can choose other options that Zenodo provides: GPLv2, Apache License, MIT License, etc. In this way, you must reply to this comment with the link to the new repository used in your manuscript, with its DOI. Also, you must include in a potential reviewed version of your manuscript the modified 'Code and Data Availability' section and the DOI of the code.

Please, reply as soon as possible to this comment with the link for it so that it is available for the peer-review process, as it should be.

Regards,

Juan A. Añel  
Geosci. Model Dev. Exec. Editor
