Comment on hess-2021-24

Dimitri Solomatine (Editor)

Editor comment on "Adapting potential evapotranspiration from climate stations to the urban canyon for hydrological models" by Merle Koelbing et al., Hydrol. Earth Syst. Sci. Discuss., <https://doi.org/10.5194/hess-2021-24-EC1>, 2021

Reviewers provided useful comments, and some judgements are tough. There is also a suggestion to change the title. I am of impression however, that the authors know how to revise the paper, and they already provided a plan for that. So I encourage the authors to work on the revision. Success! (but try also to enjoy the spring...) Take care!
