Comment on hess-2021-389

Davide Luciano De Luca

Community comment on "Hydrological response of a peri-urban catchment exploiting conventional and unconventional rainfall observations: the case study of Lambro catchment" by Greta Cazzaniga et al., Hydrol. Earth Syst. Sci. Discuss., <https://doi.org/10.5194/hess-2021-389-CC1>, 2021

This is a very interesting paper. I think that Authors could mention in the text the importance of their work for improving the modelling of Areal Reduction Factor (ARF), an important topic for many hydrological applications and engineering practices

List of references which could be cited for ARF:
