Referee comment on "A Framework for Irrigation Performance Assessment Using WaPOR data: The case of a Sugarcane Estate in Mozambique" by Abebe Demissie Chukalla et al., Hydrol. Earth Syst. Sci. Discuss., https://doi.org/10.5194/hess-2021-409-RC1, 2021

An interesting manuscript presenting a very practical framework for performance assessment of irrigation systems using readily available WaPOR data. Its good that the limitations of the WaPOR database are flagged in the manuscript in terms of estimating transpiration and evaporation.
