Author comment on "Producing hydrologic scenarios from raw climate model outputs using an asynchronous modelling framework" by Simon Ricard et al., Hydrol. Earth Syst. Sci. Discuss., <https://doi.org/10.5194/hess-2021-451-AC3>, 2021

Thank you very much for the clarification. We intend to address both validation schemes focusing on seasonal extreme values: 1) a split sample test running hydrologic models with reference scenario data and 2) comparing simulated and observed discharges, running the model with the observed meteorological data. The validation results will be discussed in relation to the applicability and restrictions of the proposed framework.
