Author comment on "A hydrological framework for persistent pools along non-perennial rivers" by Sarah A. Bourke et al., Hydrol. Earth Syst. Sci. Discuss.,
<https://doi.org/10.5194/hess-2021-461-AC3>, 2022

Thanks very much for taking the time to review our manuscript. We are pleased that you see value in the work and believe that it will form a useful guide for others, as we intend. Your comments and suggestions are well taken, and we will incorporate these into our revised manuscript. We understand that we should be more succinct where possible, better link Sections 2, 3 and 4, and adjust the location of Table 1. You have identified the main weakness as the end of the manuscript and we will work to improve this during revision in line with your suggestions (more site comparison, lessons learned and future work).
