Author comment on "Evaluating quantile-based bias adjustment methods for climate change scenarios" by Fabian Lehner et al., Hydrol. Earth Syst. Sci. Discuss., <https://doi.org/10.5194/hess-2021-498-AC1>, 2022

---

### General remarks

We thank the two referees for their comments, corrections and suggestions. One review suggests minor revisions, the other quite substantial changes to the script. Also, both of them address quite different aspects of the manuscript. Referee #2 also reviewed the first manuscript in 2020 and now recommends to accept the paper with minor revisions as his/her concerns have been addressed.

We do not see the need for another complete redraft of the manuscript and are confident that both reviewers will accept the manuscript with the changes that we elaborate in the attached pdf-file.

Please also note the supplement to this comment:
