Comment on hess-2021-597

Lelys Bravo de Guenni (Editor)

Editor comment on "Use of expert elicitation to assign weights to climate and hydrological models in climate impact studies" by Eva Sebok et al., Hydrol. Earth Syst. Sci. Discuss., <https://doi.org/10.5194/hess-2021-597-EC2>, 2022

We now have two thoughtful reviews for your paper. Thank you to the two anonymous referees for your useful inputs and your time devoted to this important task; and thanks to the authors for putting together this work.

I invite the authors to incorporate both reviewers comments and include the arguments you think would support your answers for the constructive ideas given by the reviewers.

I think the referees' comments are somehow complimentary to each other, and provide a strong set of suggestions to produce a robust paper. Both reviewers agree that your work deserves publication after some considerations are made.

We look forward to a new version of your paper and future publication at HESS.
