Comment on hess-2022-295

Dimitri Solomatine (Editor)

Editor comment on "Continuous streamflow prediction in ungauged basins: long short-term memory neural networks clearly outperform traditional hydrological models" by Richard Arsenault et al., Hydrol. Earth Syst. Sci. Discuss., <https://doi.org/10.5194/hess-2022-295-EC1>, 2022

The authors have addressed all the (very valid!) comments well. There is a clear strategy proposed on how the paper will be revised. The paper will be now passed to the next stage.
