Andre Revil (Referee)

Referee comment on "Numerical modeling of physical and biochemical processes in the subsurface and their impacts on the self-potential signature" by Xin Liu et al., Hydrol. Earth Syst. Sci. Discuss., <https://doi.org/10.5194/hess-2022-31-RC3>, 2022

The authors decided not to reply to my comments or more precisely perhaps they did not provided a keyed reponse to my comments. They put their response in a suplement material. In my opinion, this is not the correct way to handle the review process and the comments I made were reaching the inner core of the paper and modeling, which in my opinion raise serious questions. I think the paper cannot be published in the present form.
