Author comment on "Inertia and seasonal climate prediction as sources of skill in lake temperature, discharge and ice-off forecasting tools" by François Clayer et al., Hydrol. Earth Syst. Sci. Discuss., https://doi.org/10.5194/hess-2022-312-AC2, 2022

Just a short addition to my comment:
Note that l. 214-215, we mentioned that the time-consuming sensitivity experiments whose outputs are shown in Figures 3 and 4, are only performed for the Spanish and Norwegian site:
"Sensitivity analyses were only carried out for Spain and Norway because of the low number of windows of opportunity at the two other sites and considering the resources needed to execute these hindcast experiments."
