Author comment on "CAMELS-Chem: Augmenting CAMELS (Catchment Attributes and Meteorology for Large-sample Studies) with Atmospheric and Stream Water Chemistry Data" by Gary Sterle et al., Hydrol. Earth Syst. Sci. Discuss.,
<https://doi.org/10.5194/hess-2022-81-AC1>, 2022

We greatly appreciate the review comments of reviewer 1, particularly about tangible ways we can improve the dataet. We agree with points 1 and 2 raised about improving USGS datasets, but we do not wish to expand the dataset beyond USGS and initiate additional harmonizing efforts. We appreciate you going through the posted dataset and will address inconsistencies. We are unclear about the comment on summar figures for all solutes, as this was done between the main document (Figure 2 and 3) and the supplemental (Figure S1 and S2). We plan to incorporate the suggestions into our final manuscript.
