Marc de Vos et al.

Author comment on "Understanding the drift of Shackleton's *Endurance* during its last days before it sank in November 1915, using meteorological reanalysis data" by Marc de Vos et al., Hist. Geo Space. Sci. Discuss., <https://doi.org/10.5194/hgss-2022-9-AC1>, 2022

The authors would like to thank the reviewer for this positive and constructive input. Amendments made in response have both strengthened the manuscript directly and prompted us to enhance other aspects of the work. As the corresponding author I would also like to apologise for the delayed response. The timing of the review coincided with an Antarctic voyage, as well as other end-of-year academic commitments, thereby delaying the submission of these responses.

Please find itemised responses in the attached PDF.

Please also note the supplement to this comment:
