Marc de Vos et al.

Author comment on "Understanding the drift of Shackleton's *Endurance* during its last days before it sank in November 1915, using meteorological reanalysis data" by Marc de Vos et al., Hist. Geo Space. Sci. Discuss., <https://doi.org/10.5194/hgss-2022-9-AC3>, 2022

The authors would like to thank the commenter for the interest shown and the effort in conveying this constructive input. We endeavour to incorporate this input in the revised manuscript. As the corresponding author I would also like to apologise for the delayed response. The timing of the review coincided with an Antarctic voyage, as well as other end-of-year academic commitments, thereby delaying the submission of these responses.

Please find itemised responses in the attached PDF.

Please also note the supplement to this comment:
