Comment on mr-2021-36

Geoffrey Bodenhausen

Community comment on "Mechanisms of coherent re-arrangement for long-lived spin order" by Florin Teleanu and Paul R. Vasos, Magn. Reson. Discuss., https://doi.org/10.5194/mr-2021-36-CC1, 2021

I wrote a comment that was origiginally intended for a paper by Levitt and Bengs, but the discussion of that paper is now closed. I trust that Paul Vasos and Florin Teleanu will appreciate the issue, which is very much related to wandering about Liouville space.

Geoffrey
