Comment on mr-2021-46

Paul Schanda (Editor)

Editor comment on "Rapid measurement of heteronuclear transverse relaxation rates using non-uniformly sampled $R_{1\rho}$ accordion experiments" by Sven Wernersson et al., Magn. Reson. Discuss., <https://doi.org/10.5194/mr-2021-46-EC2>, 2021

Related to my previous comment regarding deposition of pulse sequence codes: in case your institution does not have a repository (listed on <https://www.re3data.org/>), then you might use zenodo (<https://zenodo.org/>).

Ideally, please deposit Varian and Bruker codes (in case you have them, of course).
Thanks.
