Comment on mr-2021-59

Anonymous Referee #2

Referee comment on "NUScon: a community-driven platform for quantitative evaluation of nonuniform sampling in NMR" by Yulia Pustovalova et al., Magn. Reson. Discuss., https://doi.org/10.5194/mr-2021-59-RC2, 2021

It is surprising that the newest program for reconstruction is from 2017. Was there no development since then on the processing side? I.e. how inclusive was the contest?

It is almost not surprising that the reconstruction from 2017 seems to have performed the best given that it could take into account all the information from the other publications. A comment on this would be useful for the reader.
