Comment on mr-2021-65

Malcolm Levitt (Referee)

Referee comment on "Radiation damping strongly perturbs remote resonances in the presence of homonuclear mixing" by Philippe Pelupessy, Magn. Reson. Discuss., <https://doi.org/10.5194/mr-2021-65-RC3>, 2022

This very good and interesting article could be improved further by attending to the very detailed comments of the other referees, which I support. I have little to add.

There is some early work on related effects by the group of Gareth Morris, see <https://doi.org/10.1006/jmra.1995.9962> and doi.org/10.1016/j.jmr.2006.08.011. The authors should refer to these papers and other ones by the Morris group and comment on them as appropriate.
