Community comment on "Simulation of NMR spectra at zero and ultralow fields from A to Z – a tribute to Prof. Konstantin L'vovich Ivanov" by Quentin Stern and Kirill Sheberstov, Magn. Reson. Discuss., <https://doi.org/10.5194/mr-2022-18-CC1>, 2022

Perhaps just as important as originality, perhaps even more so, is clarity of exposition. It may be the case that those thesis publications are not as clear as they could be. And as far as originality goes, I am sure that everything anyone needed to know could be found in Paul Corio's very complete monograph "Structure of High Resolution NMR spectra" Academic Press 1966.
