Author comment on "The effect of the zero-field splitting in light-induced pulsed dipolar electron paramagnetic resonance (EPR) spectroscopy" by Andreas Scherer et al., Magn. Reson. Discuss., <https://doi.org/10.5194/mr-2022-20-AC1>, 2022

Dear Mr. Maryasov,

thanks for bringing Your paper to our attention. We think it is an important contribution in the field of dipolar EPR spectroscopy with high-spin centers and we will mention it in a revised version of the manuscript.

Best regards
Andreas Scherer
