## **Comment on mr-2022-24**

Kong Ooi Tan (Editor)

---

Editor comment on "A perspective for magic angle spinning above 250 kHz – OptiMAS" by Jan Korvink, Magn. Reson. Discuss., <https://doi.org/10.5194/mr-2022-24-EC1>, 2023

---

Dear author of mr-2022-24,

After receiving feedback from the community and discussion with other members of the editorial team, we would like to defer the review process and request a major revision on the format/style of the article so that it falls into one of the categories that is accepted by our journal, i.e., research, review, or educational articles. Despite the term 'perspective' in the title, the current format still appears like a funding proposal.

We would be happy to continue the review after the article is in an acceptable form (either a minireview or educational article). Otherwise, I am afraid we cannot accept the article in our journal.

We wish you a pleasant day and are sorry for the inconvenience.

Please refer to the following page for detailed guidelines.
