Author comment on "Lessons from the 2018–2019 European droughts: a collective need for unifying drought risk management" by Veit Blauhut et al., Nat. Hazards Earth Syst. Sci. Discuss., <https://doi.org/10.5194/nhess-2021-276-AC1>, 2021

Dear Alban Kuriqi, many thanks for your comment. Please excuse my delayed reply, I was and still am on holidays. Speaking for our large group of authors i can guarantee that our aim was surely not to insult any nationality nor to start a political debate on "Not drought relevant" topics. We will thoroughly discuss your comment in our team and will revise our manuscript in accordance to actual european politics. Thus, i please all actively discussing commentators to come back to a rational scientific dicussion on the content of this pan-European investigation. We are looking forward to a lively scientific and fair discussion. Many thanks, Veit Blauhut.
