Community comment on "Lessons from the 2018–2019 European droughts: a collective need for unifying drought risk management" by Veit Blauhut et al., Nat. Hazards Earth Syst. Sci. Discuss., <https://doi.org/10.5194/nhess-2021-276-CC9>, 2021

Dear Veit,

Thank you for your kind reply! I congratulate you on the excellent work. No worries, I believe that you do not intend to insult any nationality, but please don't let irresponsible people be involved in this discussion. It is entirely normal to do mistakes; that's why scientific articles undergo peer review before publication. I would appreciate it very much if you corrected the maps; that would be very fair and help Kosovo take the proper adaptation measures to cope with droughts. Many thanks again for your collaboration.

Kind regards,

Alban
