## **Comment on nhess-2021-279**

Paolo Frattini (Editor)

---

Editor comment on "Sensitivity analysis of input ground motion on surface motion parameters in high seismic regions: a case of Bhutan Himalaya" by Karma Tempa et al., Nat. Hazards Earth Syst. Sci. Discuss., <https://doi.org/10.5194/nhess-2021-279-EC1>, 2022

---

Dear authors,

considering the comments of the reviewers, I encourage the authors to submit a revision. Please, address all the criticisms of the reviewers, and consider that the second reviewer was mostly not in favour of a possible publication. However, considering that the study is the first one in Buthan and the lack of detailed information, I still believe that it could be worth of pubblication, once significantly improved.

Regards

Paolo Frattini
