Comment on nhess-2021-280

Paolo Frattini (Editor)

Editor comment on "Ground motion variability in Israel from 3-D simulations of $M \square 6$ and $M \square 7$ earthquakes" by Jonatan Glehman and Michael Tsesarsky, Nat. Hazards Earth Syst. Sci. Discuss., <https://doi.org/10.5194/nhess-2021-280-EC1>, 2022

The article was reviewed by two anonymous reviewers who provided a number of suggestions and criticisms. In particular, the second reviewer highlighted some significant issues, including the impossibility of validating the proposed model.

I believe that the authors were able to respond accurately and seriously to the revisions, making the necessary corrections, but I also believe that the corrected paper (reachable in the reply to the second reviewer) should be reviewed again by the reviewers for further advice.

I therefore invite the two anonymous reviewers to make a second review round.

Paolo Frattini
