Author comment on "Modelling extreme water levels using intertidal topography and bathymetry derived from multispectral satellite images" by Wagner Luiz Langer Costa et al., Nat. Hazards Earth Syst. Sci. Discuss., <https://doi.org/10.5194/nhess-2021-387-AC2>, 2022

Dear Reviewer anonymous referee 2,

Thank you for your observations regarding our preprint. Your suggestions helped to improve our manuscript.

We appreciate that you found our manuscript interesting, despite the problems regarding its structure. The inadequate structure is a problem highlighted by all the 3 reviewers. We intend to modify it accordingly. For instance, we plan to describe the content of each chapter at the end of the introduction section and set the paper up with more clearly presented aims.

Please find in the supplement the answers to all your specific questions.

Best regards,

The Authors.

Please also note the supplement to this comment:
