Author comment on "Assessing minimum pyroclastic density current mass to impact critical infrastructures: example from Aso caldera (Japan)" by Andrea Bevilacqua et al., Nat. Hazards Earth Syst. Sci. Discuss., <https://doi.org/10.5194/nhess-2022-100-AC3>, 2022

Dear Associate Editor

Please find our response in the attached Supplement zip file.

We include:

- a cover letter for the AE;
- a detailed response letter to both the reviewers;
- revised manuscript with and without track changes, which is a necessary supplement to the response;
- revised supporting information of the manuscript;
- the review report of the referenced document Aspinall et al., 2021.

Best wishes,
Andrea Bevilacqua
(on behalf of all coauthors)

Please also note the supplement to this comment:
