Author comment on "Invited perspectives: Managed realignment as a solution to mitigate coastal flood risks – optimizing success through knowledge co-production" by Mark Schuerch et al., Nat. Hazards Earth Syst. Sci. Discuss.,
<https://doi.org/10.5194/nhess-2022-104-AC2>, 2022

We thank the reviewer for their careful consideration of our manuscript and the detailed and helpful comments provided. We agree with most of them, and we are happy to implement them in a revised version of our manuscript. This will involve the revision of parts of the Introduction (specifically lines 42-62) and an expansion of our explanations and theoretical groundings for our proposed stakeholder participation model, mostly in (but not limited to) section 6. This will be accompanied by the inclusion of additional relevant literature, incl. the literature that has kindly been proposed by the reviewer. For a revised version of our manuscript, we would also be happy to change the manuscript title to: Managed realignment as a Nature-based solution to mitigate coastal flood risks – Optimizing success through knowledge co-production.
