Comment on nhess-2022-217

David K. CHESTER (Referee)

Referee comment on "Differences in volcanic risk perception among Goma's population before the Nyiragongo eruption of May 2021, Virunga volcanic province (DR Congo)" by Blaise Mafuko Nyandwi et al., Nat. Hazards Earth Syst. Sci. Discuss., https://doi.org/10.5194/nhess-2022-217-RC1, 2022

Nyandwi et al. *Differences in volcanic risk perception among Goma's population before the Nyiragongo eruption of May 2021, Virunga volcanic province (DR Congo)*

This is a fine paper. It is well written, has a strong methodology section, has an adequate sample size from which meaningful findings are drawn and an informative conclusion. It is also well contextualised within the literature and the authors provide a very clear description of the volcanic region for readers who are unfamiliar with

Nyiragongo. It is a fine addition to the literature

I am happy for this paper to be published and do not feel any modifications are required.
