Comment on nhess-2022-6

Anonymous Referee #3

Referee comment on "Invited perspectives: An insurer's perspective on the knowns and unknowns to face in natural hazard risk modelling" by Madeleine-Sophie Déroche, Nat. Hazards Earth Syst. Sci. Discuss., <https://doi.org/10.5194/nhess-2022-6-RC3>, 2022

The manuscript describes the development of risk models used in the insurance industry over the past three decades and discusses the need for further improvements. The paper touches on a wide range of topics, such as the need for detailed loss and exposure data or the challenge of climate change. A review paper on these topics from the perspective of the insurance industry is highly valuable and desired by the scientific community. However, the paper remains very superficial and lacks a real insurance perspective. I suggest more rigorous structural editing to better present the content. I strongly encourage the author to rewrite and restructure the manuscript; it is truly of great interest and could have a high impact for the community.

All comments are listed as major/minor revision points and edits in the attachment.
