Author comment on "Multiscale flood risk assessment under climate change: the case of the Miño River in the city of Ourense, Spain" by Diego Fernández-Nóvoa et al., Nat. Hazards Earth Syst. Sci. Discuss., <https://doi.org/10.5194/nhess-2022-80-AC3>, 2022

The methodology applied do not need the input of more variables since is based on the Curve Number methodology, which requires only the precipitation data. This was clarified in the text (Section 2.3 Hydrological and Hydraulic Models).
