Comment on nhess-2022-80

Anonymous Referee #2

Referee comment on "Multiscale flood risk assessment under climate change: the case of the Miño River in the city of Ourense, Spain" by Diego Fernández-Nóvoa et al., Nat. Hazards Earth Syst. Sci. Discuss., <https://doi.org/10.5194/nhess-2022-80-RC3>, 2022

Addendum to my previous comments

It seems that the authors applied continuous hydrologic modeling with HEC-HMS. In this case, however, further input variables are needed, such as temperature. Please clarify!
