Comment on nhess-2022-83

Anonymous Referee #2

Referee comment on "Earthquake-induced landslides in Haiti: seismotectonic and climatic influences, size-frequency relationships" by Hans-Balder Havenith et al., Nat. Hazards Earth Syst. Sci. Discuss., <https://doi.org/10.5194/nhess-2022-83-RC2>, 2022

Dear authors,

You have provided an interesting paper, based on comprehensive documentation. However, the entire structure needs a lot of improvements: there are numerous paragraphs which doesn't fit the particular chapter (numerous discussions in the results chapter, not a proper introduction, etc; see attached detailed review); there are numerous sentences that are very long and complicated, making the read difficult; the illustration needs improvement. The detailed review might be helpful.

Please also note the supplement to this comment:
