Received and published: 3 April 2019

We would like to let you know how many reads (views) has had our paper during the discussion time. There have been around 500 views and downloads of the paper, and most of the readers have been USA, where ENSO and PDO are important issues of the Pacific Ocean. So far, nobody has made a comment. We think this is telling the outcomes of the paper are or could be accepted. We deserved some credit for that.

Please see the metrics section.
