## **Editorial comment on os-2020-121**

Trevor McDougall (Editor)

---

Editor comment on "Preface: Developments in the Science and History of Tides" by Philip L. Woodworth et al., Ocean Sci. Discuss., <https://doi.org/10.5194/os-2020-121-EC1>, 2021

---

Dear Authors, you are now in receipt of three thoughtful reviews of this OSD manuscript. I recommend that you prepare a revised version, based on these comments. I have only one additional extra point to make, namely that the article concentrates on the influence and achievements of Joseph Proudman, but neglects to mention his important roles as President and Secretary General of IAPSO (as listed on page 143 of Smythe-Wright et al. (2019)). You may want to include this aspect of Proudman's international influence.

After the open comment period ends on 5th March 2021, and after you have submitted a revised manuscript, I fully expect to be able to accept the paper for publication in OS.

Trevor McDougall (editor for this paper)
