Author comment on "On the Role of Westerly Wind Anomalies in the Development of the 1982-1983 El Niño" by David J. Webb, Ocean Sci. Discuss.,
<https://doi.org/10.5194/os-2021-5-AC4>, 2021

Thanks for your comments - I've only a couple of hours until the end of the review period so briefly:

1. Re the figures - your comments are similar to those of the other referees. Originally many of them were designed to be side by side in the two column version of the manuscript. I'll take your points into account but hope that any revised version you see will have two columns.
2. Re validation - I check that.
3. Re all the 'english' - thanks for the corrections.

Regards,

David Webb.

p.s. As a result of other reviewers comments I've been rereading some old papers and found there is a bit more support for Wyrtki's ideas than I had remembered - including the original Myers and Donguy paper.
